

# Cosactive Zinc Hyal

Innovative zinc hyaluronate for protection, moisture and balance

Cosactive Zinc Hyal is a highly effective combination of hyaluronic acid and zinc. The active ingredient combines the intensive moisturising, repairing and skin barrier-strengthening properties of hyaluron with the soothing, antioxidant and antibacterial properties of zinc.

The result: a multifunctional active ingredient for healthy, resilient and balanced skin – ideal for formulations for sensitive, blemished or skin in need of regeneration.

## Hyaluronic acid in cosmetics

Hyaluronic acid is one of the best-known active ingredients in skin care. It binds many times its own weight in water, plumps the skin and supports its natural barrier function. In addition to providing intensive moisture, it helps to visibly smooth fine lines and improve the skin's structure in the long term.

## Zinc in cosmetics

Zinc is an essential trace element with many benefits for the skin. It regulates sebum production, supports wound healing and has antioxidant properties. Zinc also helps to soothe inflammation and maintain the balance of the skin's microbiome – ideal for sensitive skin or skin prone to blemishes.

## Processing

Ideally, Cosactive Zinc Hyal should be added to the active ingredient phase at below 40°C.

## Recommended concentration

0.1-3.0%

INCI

Zinc Hydrolyzed  
Hyaluronate

## Cosactive Zinc Hyal – Innovative zinc hyaluronate for protection, moisture and balance

Cosactive Zinc Hyal combines the moisturising power of hyaluronic acid with the protective and soothing properties of zinc – for innovative cosmetics that combine skin balance, resilience and visible beauty in a single active ingredient.
